SIRIM 3:2014

Foreword

This standard was developed by the Project Committee on Code of Practice for Installation and Maintenance of Ceiling Fan established by SIRIM Berhad.

The safe installation of ceiling fans is of public concern as there have been many mishaps relating to ceiling fans reported in the country. It was found that many of these cases were due to improper installation of the fans. In response to this public concern, industries together with SIRIM have taken an initiative to address this issue through the development of SIRIM Industry Standard. This standard is developed to provide guidance to the installer on the safe and proper installation of ceiling fans.

This standard will be subjected to periodic review to reflect current needs and conditions. Users and other interested parties may submit comments on the contents of this standard for consideration in future versions.

Compliance to this standard does not by itself grant immunity from legal obligations.
